MAGIC BIRDS TOKEN

INTRODUCTION

What is the MBT

It all started with
a question

How can a cryptocurrency survive and be decentralized without being affected by inflation?

MAGIC BIRDS TOKEN →

**Even if DeFi means
decentralization,
what is really meant
is the non-manipulated
currencies.**

People became
dependent as central
structures tied
everything to
themselves.

MAGIC BIRDS TOKEN

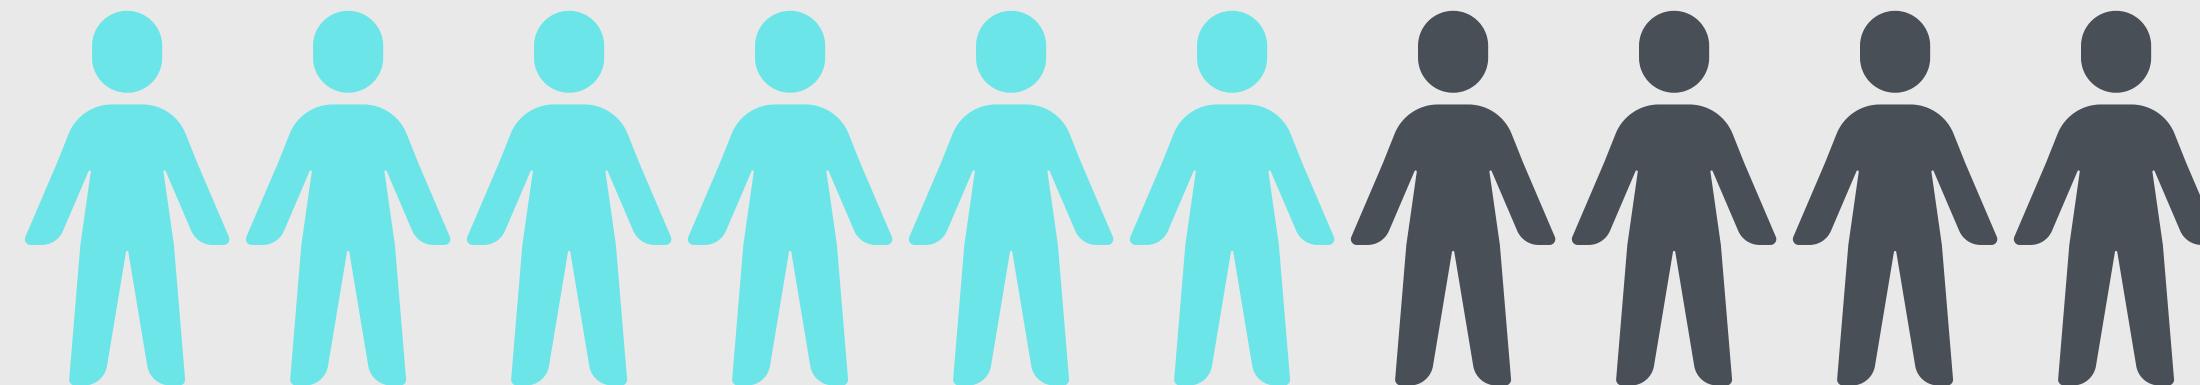

At this stage, people get to know themselves, namely DeFi, and **MagicBirds** sets out to present this ecosystem to them.

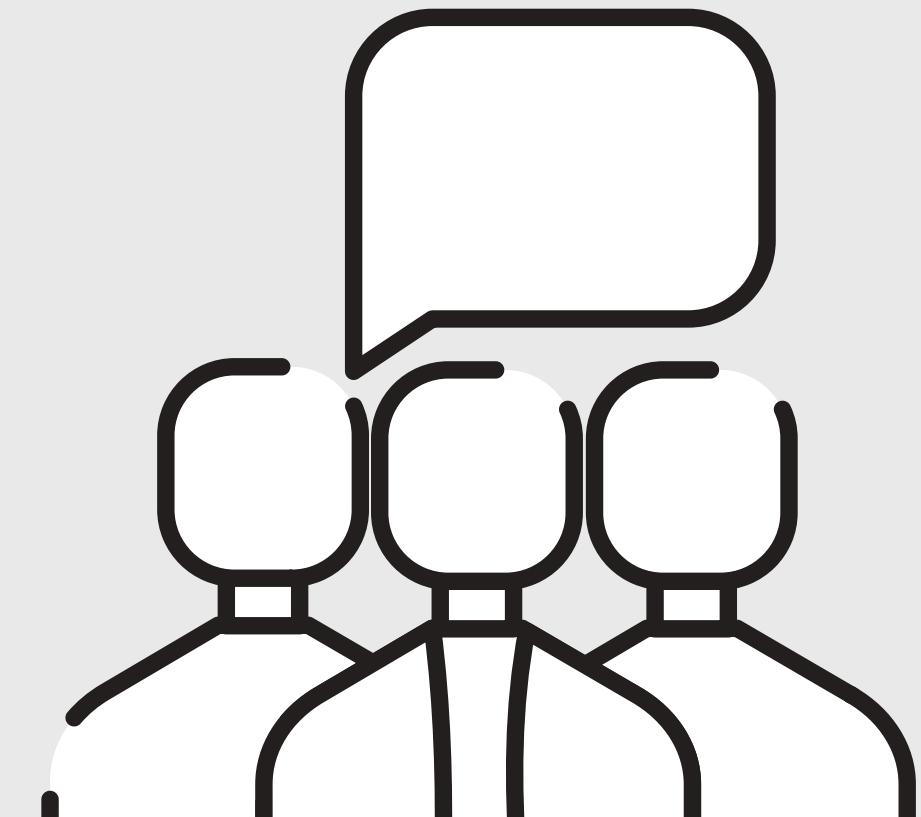

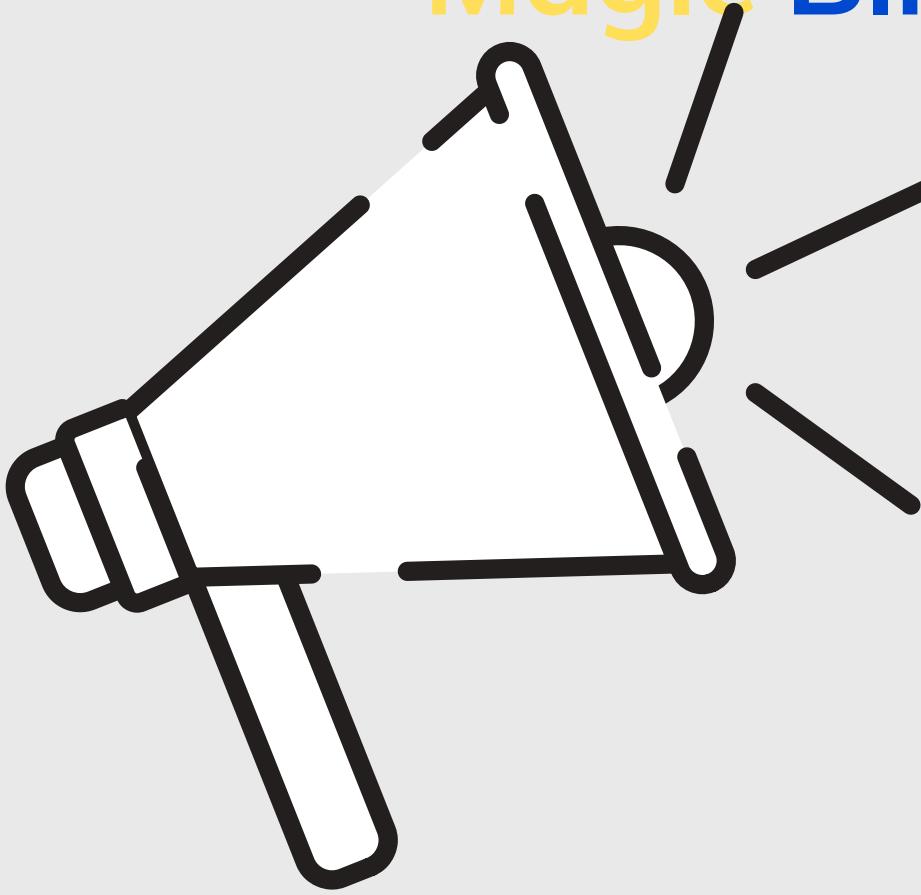

We aim to develop technology for the protectors and conservationists of endangered bird species around the world.

Magic Birds Token to
flourish as a 100% community-driven
project with markedly engaged holders and
rapid growth on a daily basis.

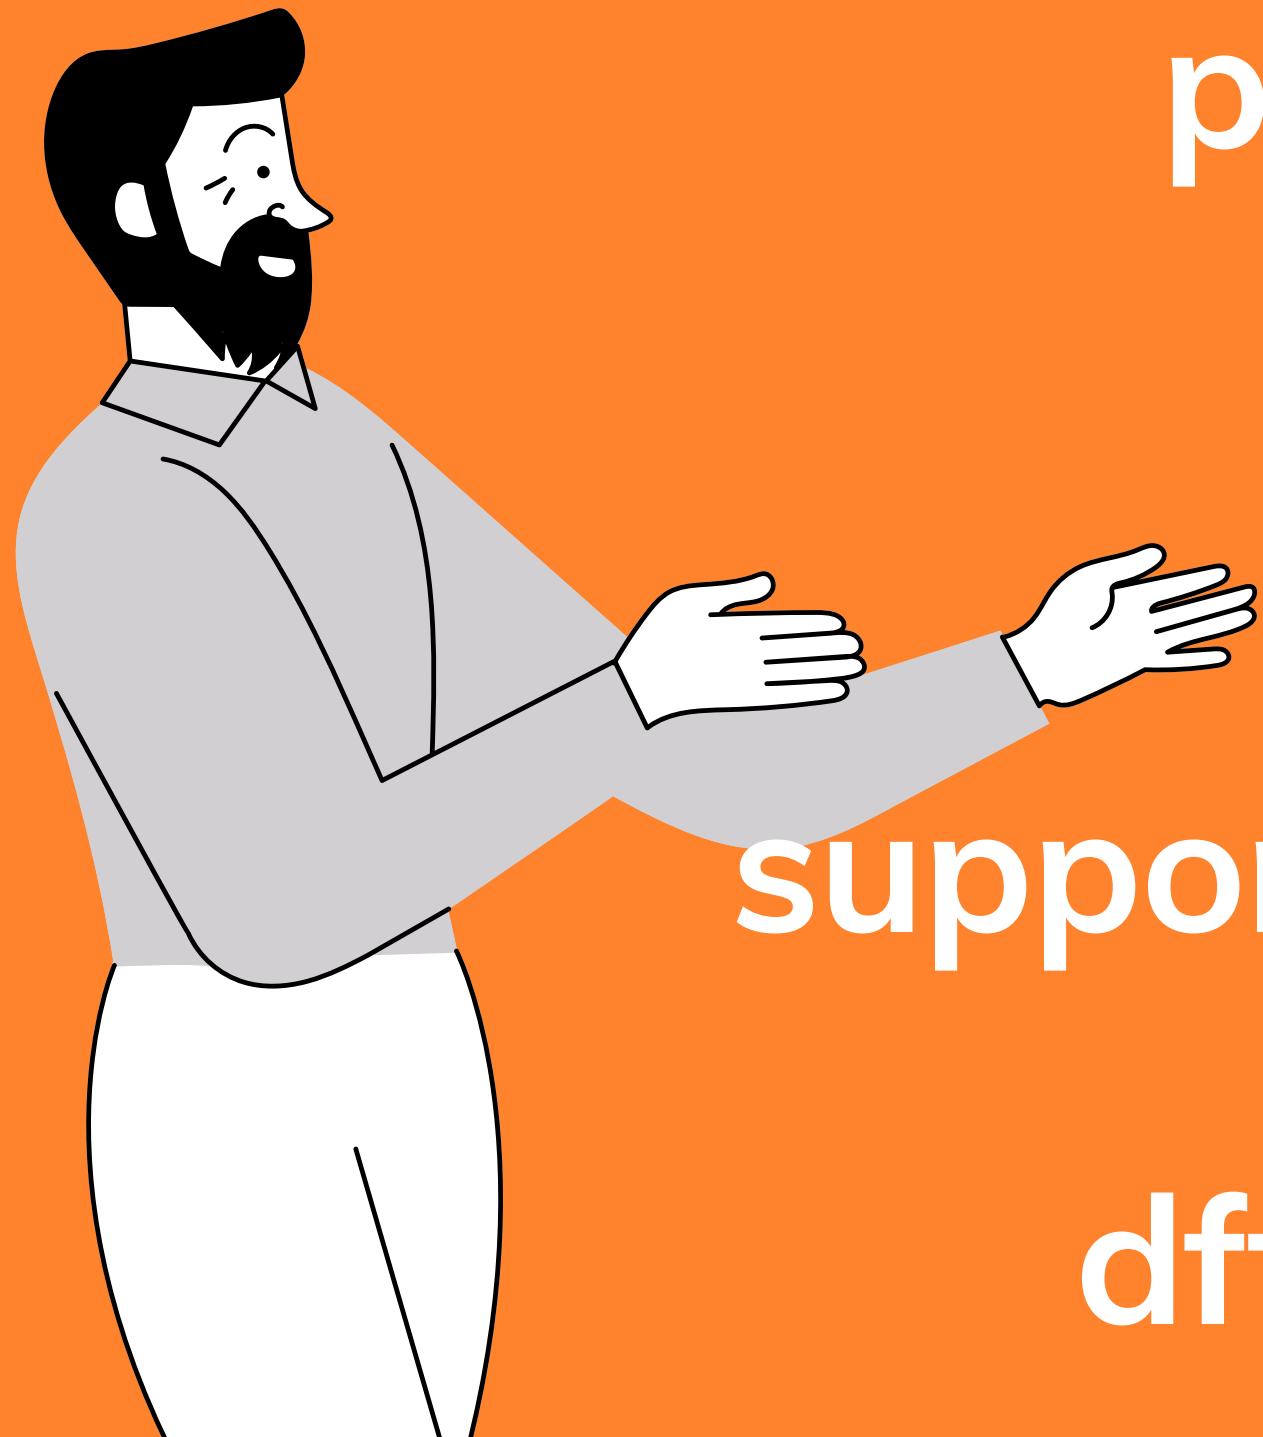

Released July, 2021 on the **Binance Smart Chain** network, the Magic Birds Token project has been iteratively built and improved upon by volunteers within the community since its inception. Graphic designers, writers, web developers, influencers, marketers, data analysts, translators, and more have contributed their talents to help **Magic Birds Token** grow into an inspirational model of community-driven success.

The project has become a unique social experiment in which the Investors are integrated into the project both from a community and developmental standpoint. With so much progress achieved by its community in such a short amount of time, **Magic Birds Token** stands as a solid milestone in this progressive, exciting age of the Social Blockchain.

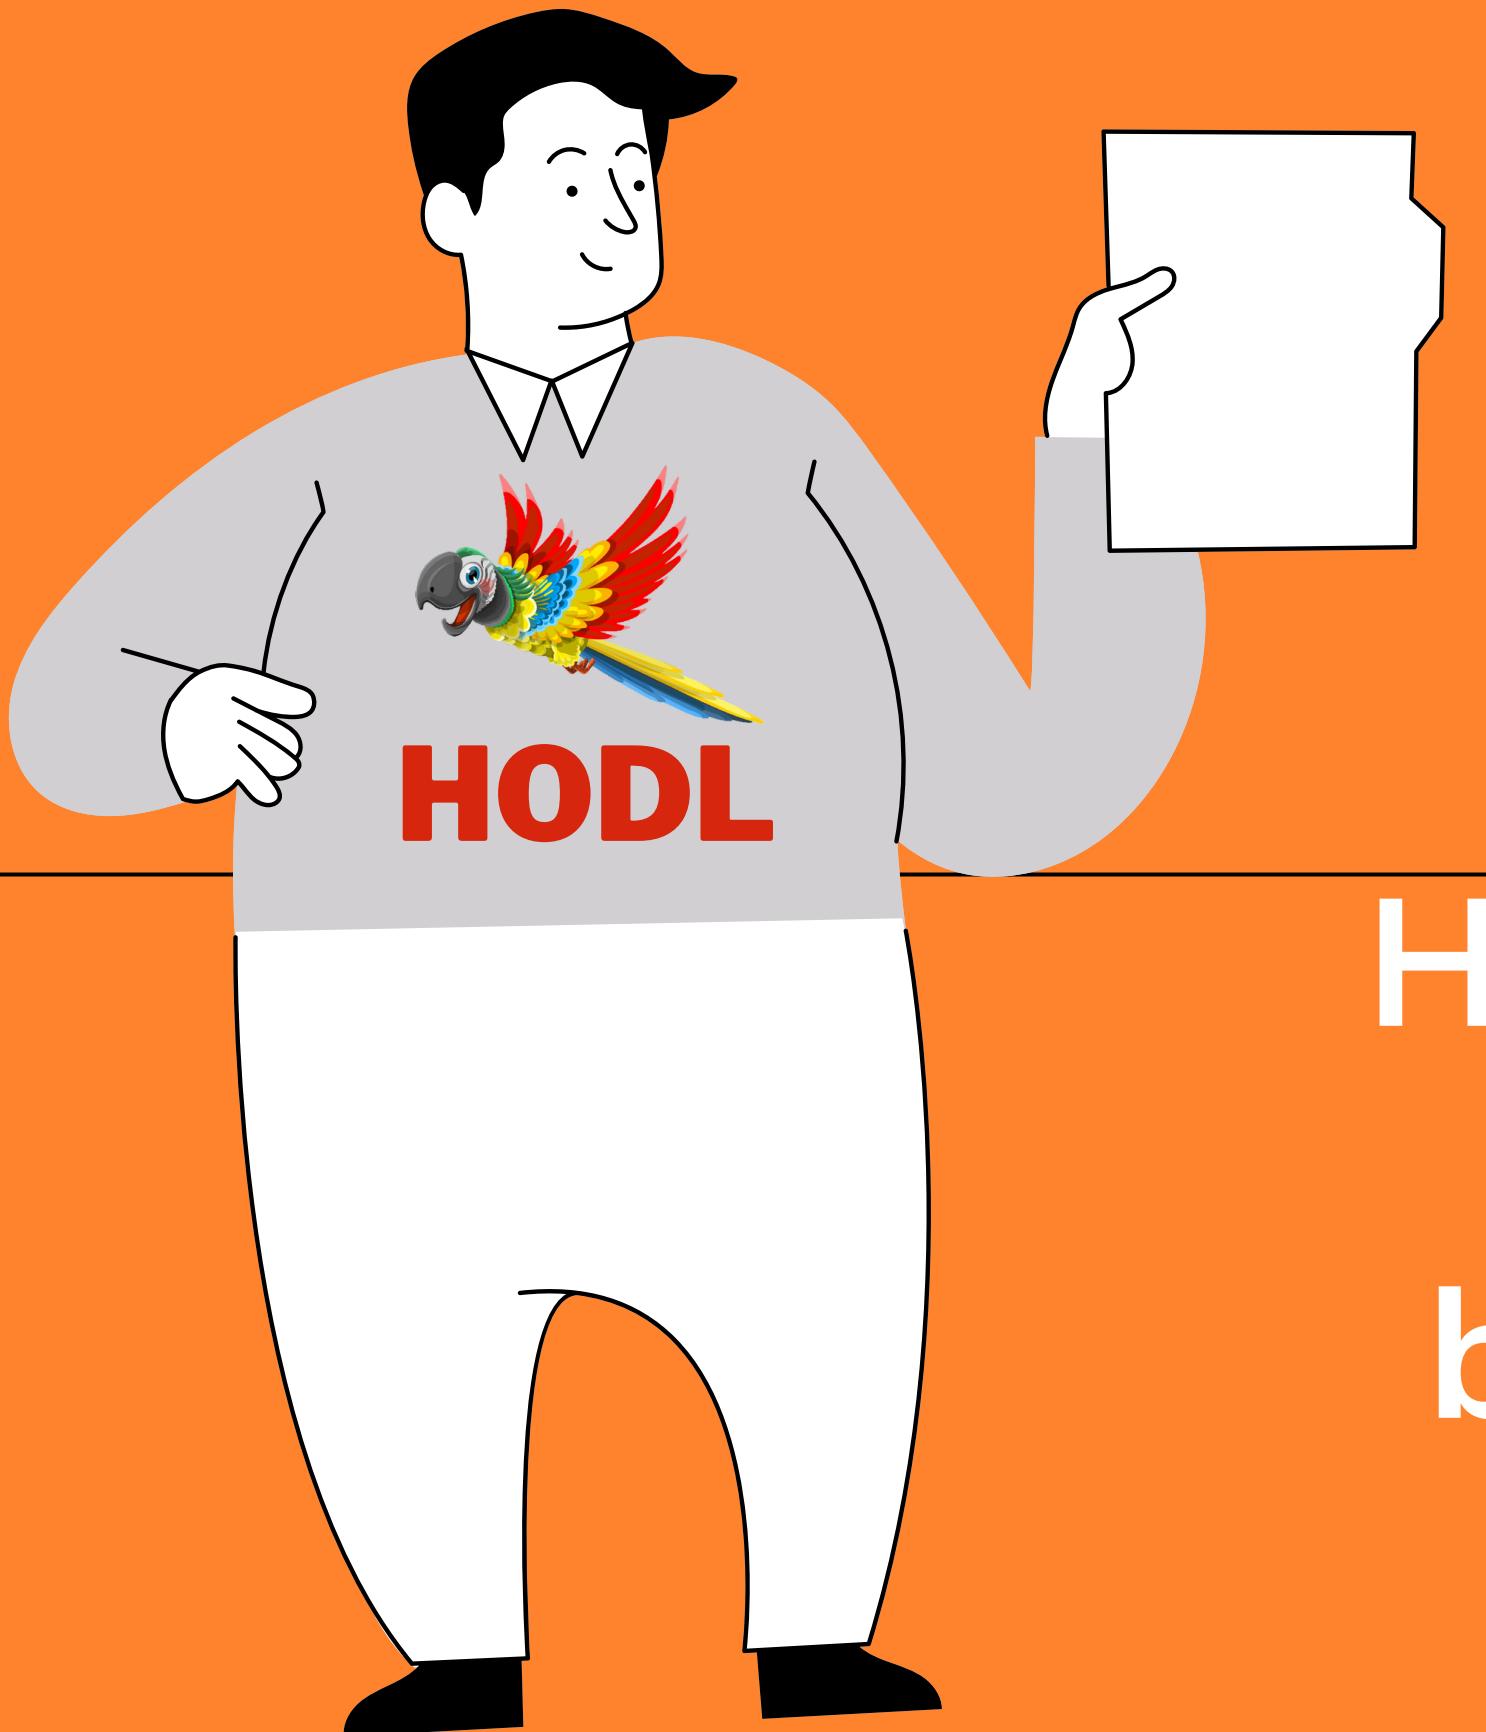

Automatic Liquidity Pool (LP)

Every trade on the protocol provides automatic liquidity to multiple pools used by exchanges.

This system; It's used to support decentralized lending, trading and different investment functions.

Automatic LP is the secret
sauce of MAGIC
BIRDS TOKEN .

Here we have a function that
acts as a two-fold
benefcial implementation for
holders

Frst, the contract sucks up tokens from sellers and buyers alike, and adds them to the LP creating a sold prce floor.

**Frst, the contract
sucks up tokens from
sellers and buyers
alke, and adds them
to the LP creatng a sold prce floor.**

When MagicBridgesToken tokens are used, 10% transaction fees are deducted, this is deducted from every MagicBridgesToken transaction. 5% of the total transaction fee is distributed to other MagicBridgesToken holders, the other 5% is sent to the liquidity pool. Thus, while MagicBridgesToken rewards those who do not sell tokens, the token burns completely every time it is sold. Holders are rewarded with this transaction..

The system, called static rewards,
promises long-term earnings to
token holders

- RFI Static Reward Mechanism:
Asset holders earn passive returns when they keep their MagicBrds token Con balance in the wallet indefinitely. The Static Reward Mechanism is a feature that reduces the sale of assets and thus helps to achieve price stability.

The fact that users prefer to hold their assets instead of selling them helps Magicard tokens reach a stable price.

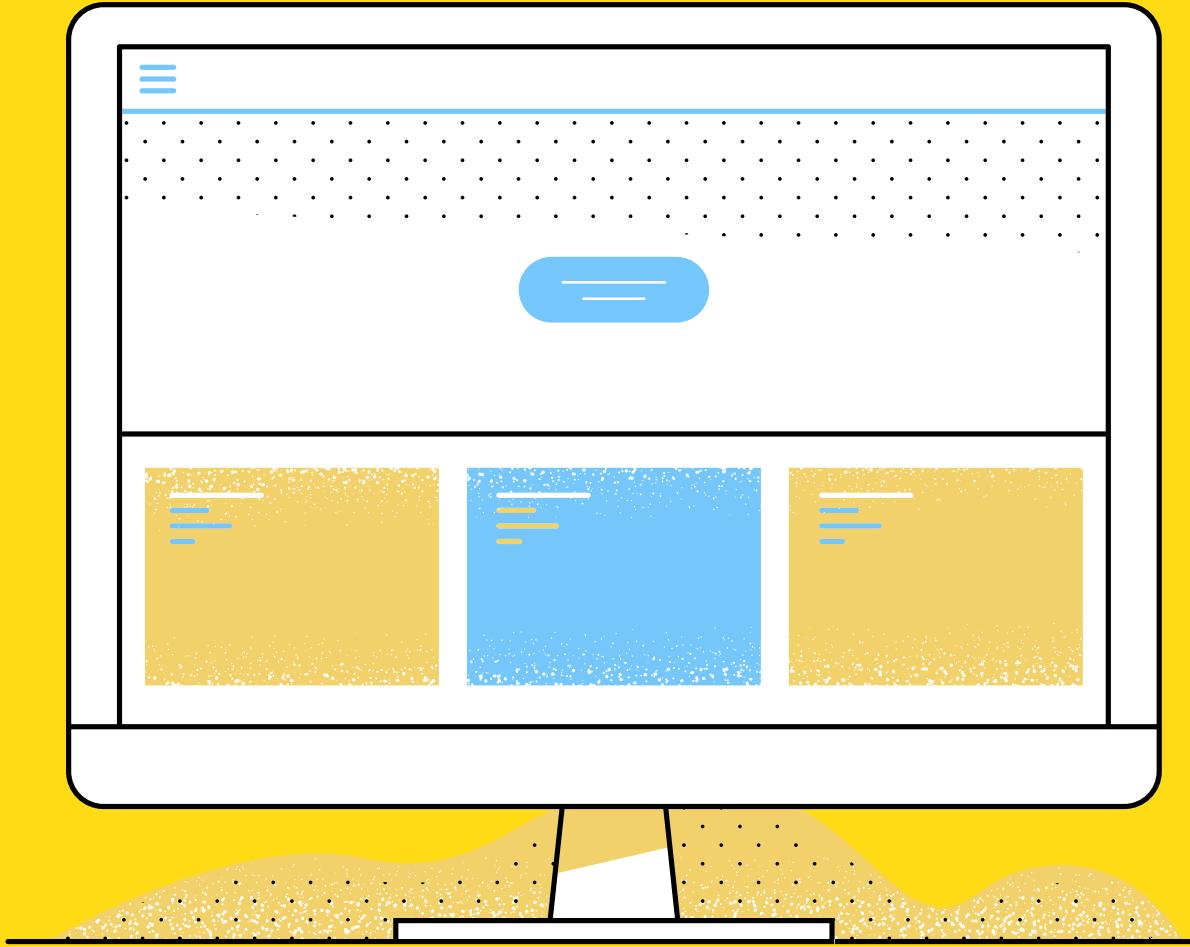

WHY DECENTRALIZATION

- **Safety:** funds are never transferred to third parties, users trade directly from their wallets (for example, Uniswap exchange interacts with Metamask wallet);

**Personal data security:
no account
registration or personal
data is required to work with DEX.**

**Global: decentralized exchanges
are still outside jurisdictions
(or in a “legal loophole”),
and there are no restrictions on
who can interact with them;**

Magic Birds Token

**BINANCE
SMART CHAIN**

WHY BINANCE SMART CHAIN?

Most DeFi applications involve myriads of transactions, which incur transaction fees at every step. For this reason, blockchain fees are an important factor to consider before choosing a blockchain protocol.

Currently, the most popular blockchain – Ethereum, has recorded fees over \$200 for a single transaction On top of having lower fees, Binance Smart Chain was specifically designed to enhance scalability in blockchains with high throughput for easy implementation of smart contracts to build scalable decentralized applications..

Security

Magic Birds Tokens safe by design. It is an ownershiprenounced token with each buy and sell automatically contributing to a liquidity pool that is locked forever. Furthermore, half of the total supply was burnt into a dead address in the project's beginning.

It is impossible to modify Magic Birds Token's contract, and it is impossible to pull liquidity from it. The team behind Magic Birds Tokens is a fully volunteer team.

Strategy

Strategy; The method is how your time and resources are used to achieve your company's mission and vision.

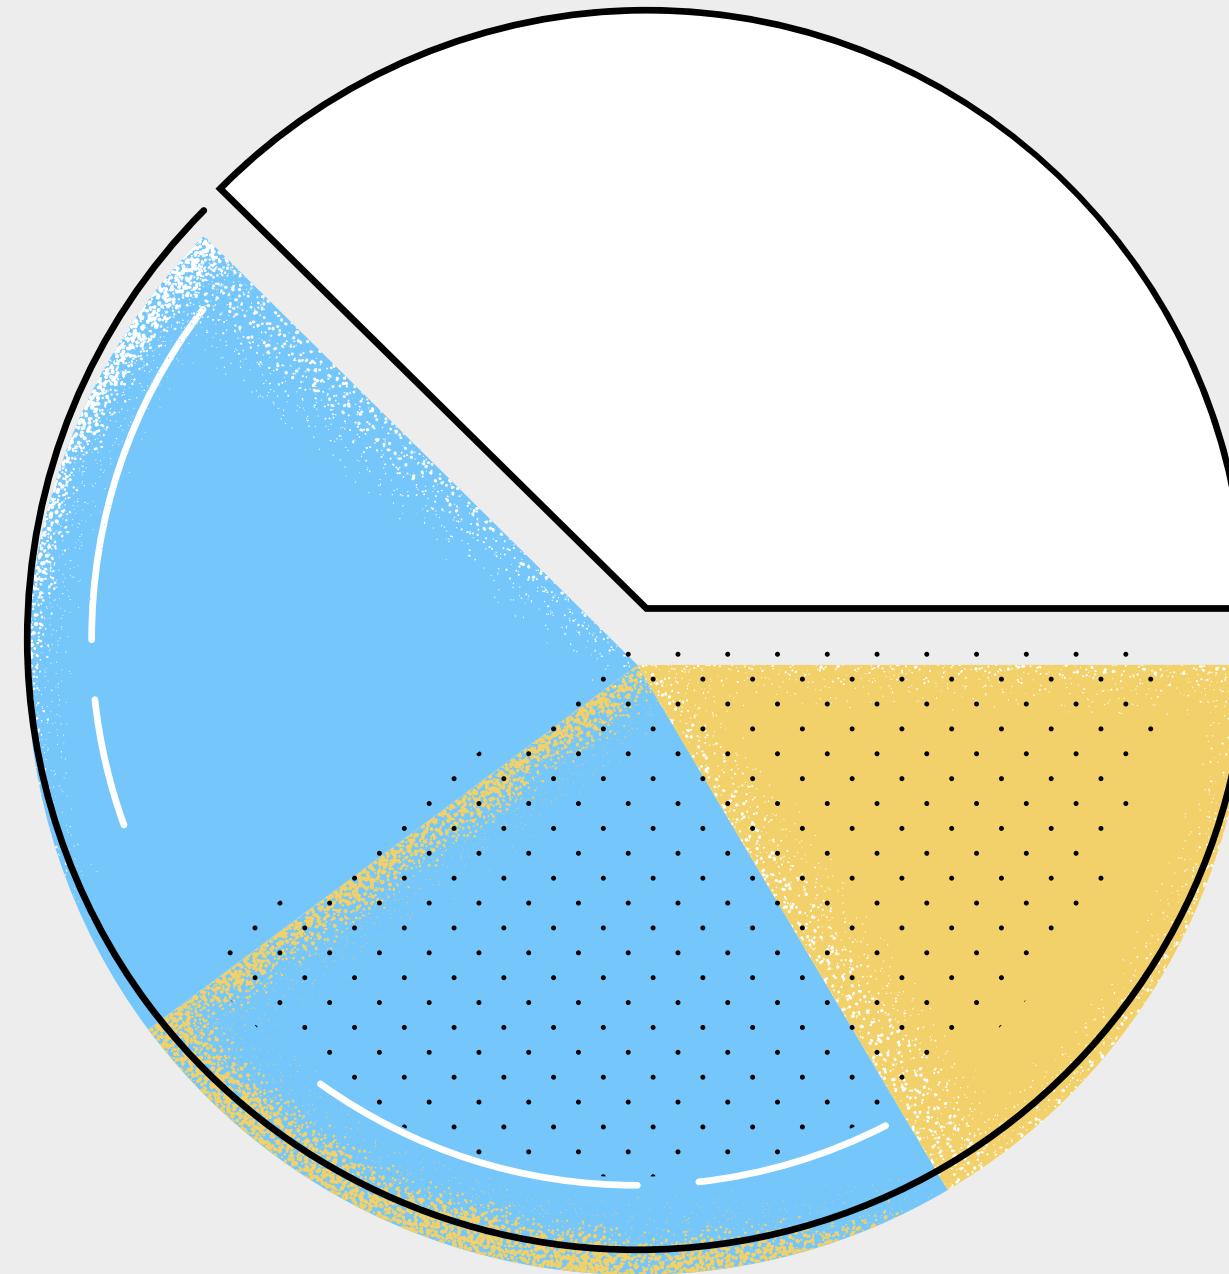

Tactics

Tactics are the specific methods, resources, and techniques you need to carry out your strategy.

Application

Practice is how you use the tactics you choose. It covers measurable results such as timelines and deliverables.
